About Me

I am a capable Full Stack (MERN) software engineer with a keen passion
for knowing the inner workings of the industry, a strong desire to expand my
current skillset and the ability to learn new things quickly. I have excellent
communication skills both written and verbal and have prior customer
support experience. I am proficient at problem solving which I believe to be
the key aspect to this field. I possess a strong interest in all things related to
computer science, both hardware and software and have been using
computers since I was 4 years old. Needless to say I have very good
general IT literacy and can work in any virtual environment. I am looking to
be challenged and use my obtained knowledge of software engineering in a
professional setting to obtain real life experience.

Work Experience

2019 - 2022

Wolt
 • Courier
Delivered food from restaurant to customer using my own transportation
and mostly my own equipment. This job required verbal communication
skills with both aforementioned parties, written communication skills with
Wolt support and problem solving skills for finding restaurants and
customers homes.

Occasionally I would get and fulfill requests to continue taking orders for
longer periods of time due to a lack of drivers.

Education

2021-2022

The Odin Project
A project driven, self-taught curriculum with a strong emphasis on technical
skill development.
 • Software engineering fundamentals (Linux development environment,
Version control using Git and GitHub, HTML, CSS and JavaScript)
 • Package management (NPM, Webpack)
 • Front End frameworks (React)
 • Back End JavaScript runtime (Node.js)
 • NoSQL databases (MongoDB)

2019

Panevėžys Adult & Youth Education Center
High School
